Update dimensions, **if** custom

- A** is the top width. **A** is normally the balance of the plank width, **A = (Plank width) - B**, unless requested otherwise. Do not provide **A** when **a*** is provided.
- a*** is the restricted top width measured from the visible top surface of the adjacent plank to the tread edge. This is an optional dimension *only* required when the nosing is to fit a previously installed adjacent plank. Do not provide **a*** when **A** is provided.
- B** is the outside measurement of face (drop) size. **B = 2"** unless requested otherwise. Do not provide **B** if **b** is provided.
- b** is the inside measurement of the face (drop). This measurement is useful when the nosing must cover a tread board or a certain top section of the riser. Do not provide **b** if **B** is provided.
- Use separate order sheets for different nosing profiles.
